Product Search Advisor

This module is a chargeable module, if you are interested in this module, please reach out to our admin team on the following link to inquire [Click Here](#)
If you have already purchased this module, please continue.

Introduction

Our product search advisor is a powerful tool that allows your customer to quickly search and find a product using an advanced configuration of your filters across your products to drive this quick catalogue search using a smart intuitive interface. Please see a basic user interaction using the advisor below.

To briefly explain the video, this allows the user to select a category, and using your own configuration of the advisor you can guide your customers to shop by relevant results related to those categories. For example, TVs to be shopped by size, laundry to be filtered by load size, and/or installation type, and this can all be configured using our smart front end utility.

once this module is enabled for you, a front-end utility becomes available to you to use in a variety of different configurations. it will display by default all categories available to you.

Dynamic Filters Configuration

Open the Configurator

Navigate to **Calculus > Product Advisor**

Product Advisor Configurator

Product Advisor

Use the Product Advisor Configurator to set the second and third advisor filters for each cached advisor category. The page highlights where products are missing the configured filter values and allows customers to export reports so those data gaps can be identified and corrected. Regenerate the Product Advisor cache if categories or attributes are missing.

Scope: Default Config

Module Enabled

Regenerate cache after category or attribute changes.

Missing Filter 2: 0

Missing Filter 3: 0

CATEGORY	PRODUCTS	FILTER 2	FILTER 2 LABEL	FILTER 3	FILTER 3 LABEL
#1144 Air Fryers	1 Products in category	-- Use static settings -- Choose the second step attribute or leave this row on static settings.	Select Filter 2 Label	-- Disabled -- Enabled only when Filter 2 is configured.	Select Filter 3 Label
#936	3				

Save Configuration

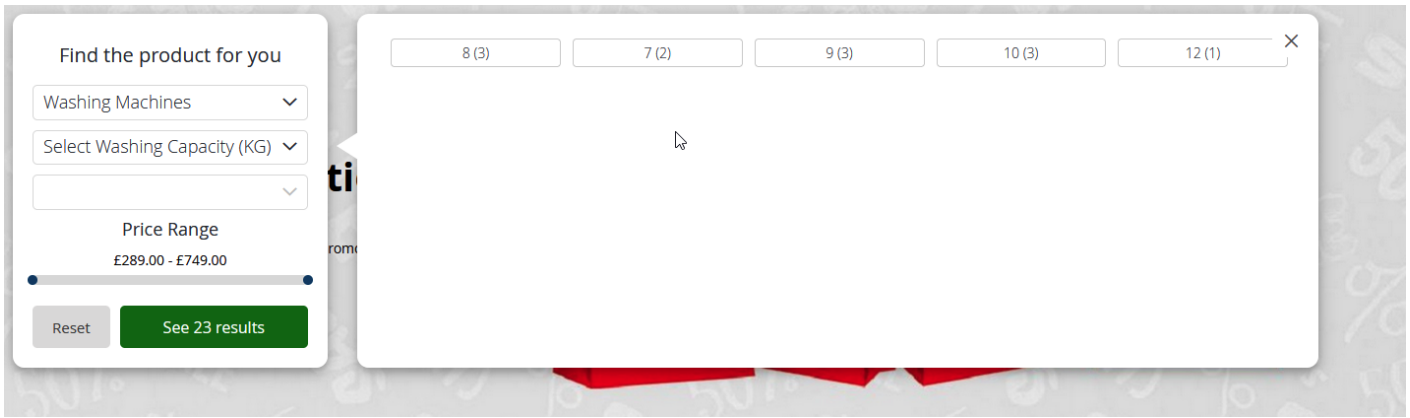

From here you will see each parent category separated into its own block. Within each block you will configure the specific attributes which will be used for the sub department.

Configure Attributes

In the example bellow we have used the Washing/Drying Capacity attributes as Filter 2, the manufacturer as Filter 3 and adjusted the labels accordingly.

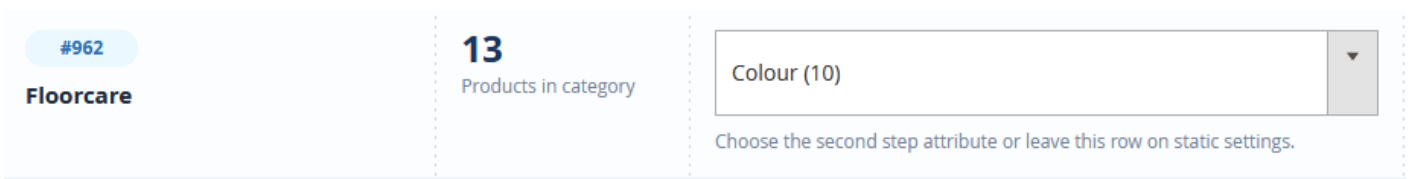

#977 Tumble Dryers	17 Products in category	Capacity (Kg) (17) Choose the second step attribute or leave this row on static settings.	Select Drying Capacity	Manufacturer (17) Enabled only when Filter 2 is configured.	Select Manufacturer
#980 Washer Dryers	8 Products in category	Capacity (Kg) (8) Choose the second step attribute or leave this row on static settings.	Select Washing Capacity	Manufacturer (8) Enabled only when Filter 2 is configured.	Select Manufacturer
#983 Washing Machines	27 Products in category	Capacity (Kg) (26) Choose the second step attribute or leave this row on static settings.	Select Washing Capacity	Manufacturer (27) Enabled only when Filter 2 is configured.	Select Manufacturer

You can see how this will look on the website here:

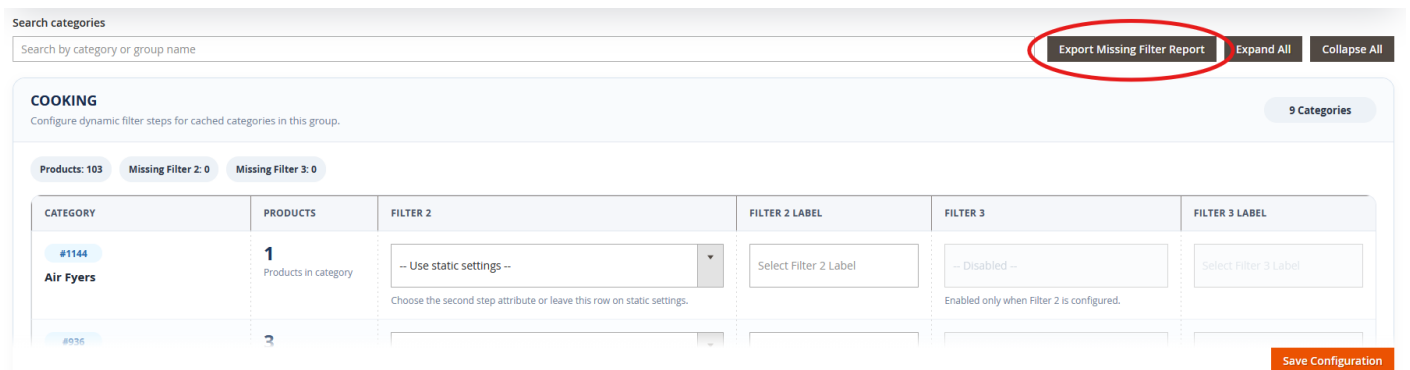

Missing Attributes

You can see here that there are 13 products in **Floorcare** but only 10 have the **Colour** attribute.

To view all products that are missing filter attributes, click **Export Missing Filter Report** in the top right of the page.

This will then generate an Excel file of all missing attributes from individual products.

Save Changes

Once you have finished configuring your filters you must press **Save Configuration** at the bottom of the page and flush the cache.

Optional: Search Advisor Widget

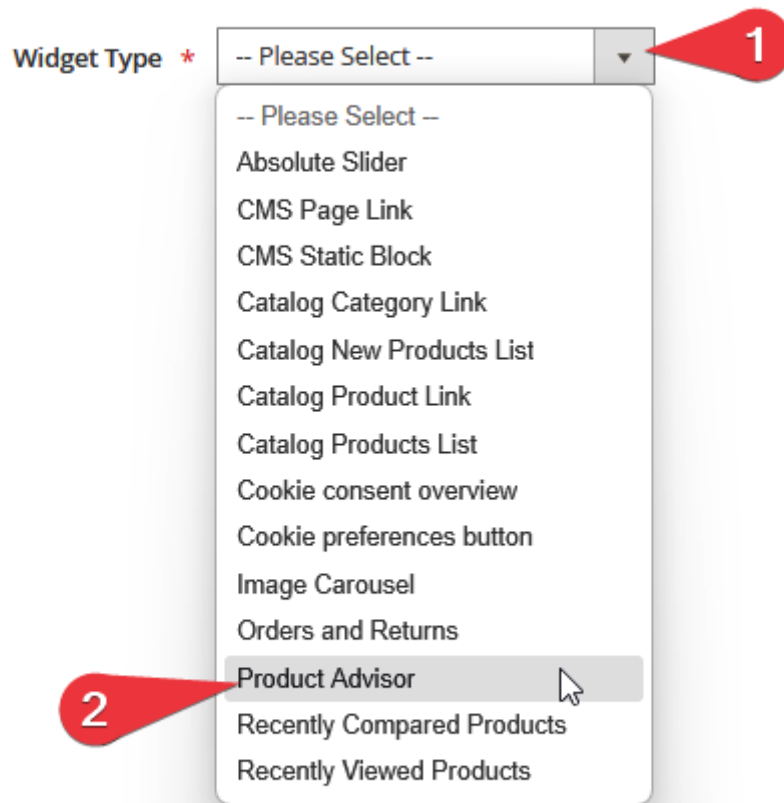

With the Products Search Advisor enabled you will also have the ability to inject the advisor as a widget throughout the site but with some caveats.

In the example above the advisor has been added to a laundry landing page and displays just the sub departments of Laundry in the first filter. This is achieved using a HTML code element in Magento's page builder.

Start with adding a HTML code element to your block or page. Once added, select the  icon that appears when hovering over the element. In here you will select **Insert Widget...** and select product advisor from the Widget Type dropdown.

widget instance.

You should no see a new dropdown called Category. Select the parent department you want to use for the first filter.

NOTE: The advisor can only use a single department when used as a widget.

Widget Type * Product Advisor ▼

Widget Options

Insert Widget

Once you have selected your department, now press and save your block/page.

Calculus Product Labels

(WIP)

Use Product Labels to add clear product messaging across your storefront. You can create either standard image badges or flexible service rows for delivery, finance, promotions, availability and other customer-facing information.

Live Editor unavailable?

Ask Calculus support whether the site's secure Live Editor setup has been completed. Until it is available, standard image badges can still be managed through the normal Admin form, but without Live Editor's visual preview and service-row tools.

Product Label Library

The Product Label Library is the central place to find, filter, create and manage labels. Open it from **Content > Product Labels**.

Manage Product Labels

CALCULUS

Product Label Library

Create, preview, schedule, and manage every storefront badge and service row in one place.

- Keyword search** - Find a label by its internal title.
- Filters** - Narrow the library by label type, status, group or availability.
- Image preview** - Shows the image currently assigned to the label.
- Label type and status** - Shows whether it is a standard badge, service row or branch availability row, and whether it is enabled.
- Availability** - Shows whether the label is currently live, scheduled or inactive.
- Label action menu** - Open Live Editor, edit or delete an individual label.

7. **Header actions** - Manage groups, open Live Editor, create in Live Editor or create a standard label in Admin.

Use **Open Live Editor** when you want to browse the storefront and choose a label there. Use **Live Editor** from an individual label action when you already know which label you want to edit.

If you switch to another label while you have unsaved changes, Live Editor asks whether you want to **Save then switch**, **Discard and switch**, or **Cancel**. This prevents accidental loss of work.

What you can create

Label type	Best for
Standard image badge	Warranty badges, sale graphics, finance logos, promotion graphics and product data-sheet markers.
Service information row	Flexible rows containing an icon or image, title, supporting copy, optional tooltip and optional link.
Branch availability row	A service row which can display configured branch availability information.

Live Editor availability

Live Editor is the recommended way to create and configure Product Labels. It lets you work against the real storefront, see private visual feedback as you edit, switch device previews, inspect placement and save only when the label looks right.

Live Editor needs a one-off site setup by Calculus support. Once it has been enabled, use it for new labels and for updating existing labels wherever possible.

If Live Editor is not available

You can still use the normal **Create Label** and **Edit** forms to create and update standard image badges in the established way. These badges continue to support the legacy placement options, including:

- product-gallery and catalog-image corners;
- product-page panel / aside-right rows;
- below-gallery rows; and
- catalog above-image positions.

The badges will work normally, but the site will not have the modern Live Editor benefits: live storefront feedback, visual device previews, page label selection, image library workflow and flexible service-row configuration.

Service information rows and branch availability rows need Live Editor to be enabled. If you need those newer label types but cannot open Live Editor, contact Calculus support to arrange the

secure site setup.

Label groups

Groups organise your Label Library and Live Editor list. They do **not** change which products can see a label.

- Labels with no group are shown as **Global**.
- Choose a group while creating or editing a label.
- You can create a group from the label form or Live Editor.
- Use **Manage Groups** from the Product Label Library to create, review and delete groups.
- When a named group is deleted, its labels are moved safely back to **Global**. The labels themselves are not deleted.

Manage Product Label Groups

CALCULUS

Product Label Groups

Organise labels for the Admin library and Live Editor. Labels without a group remain Global.

1 groups 79 Global labels

Back to Label Library

Create a label group

Use a group to organise labels. Assign labels from the Label Library form or Live Editor.

Group name

For example: Summer pro 1

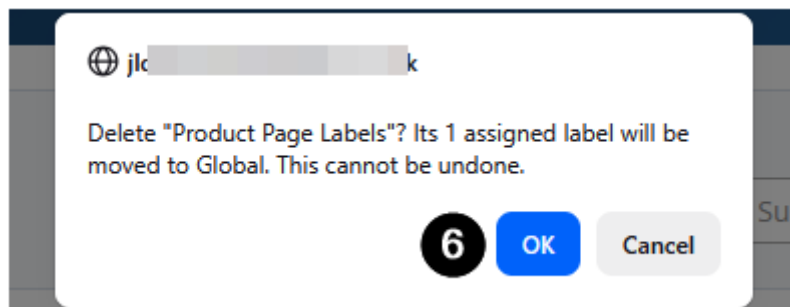

2 Create group

Existing groups 3

Deleting a named group moves every label assigned to it back to Global.

1 groups

Group	Labels	Action
Global Default	79 labels	Always available
Product Page Labels	1 label 4	Delete group 5

1. **New group name** - Enter the name of a new group.
2. **Create group** - Adds the new group to the library.
3. **Existing group** - A group currently available for labels.
4. **Label count** - Shows how many labels belong to that group.
5. **Delete group** - Removes the group, not its labels.
6. **Delete confirmation** - Confirms that labels in the deleted group move safely back to **Global**. This action cannot be undone.

Creating or editing a label

1. Go to **Content > Product Labels**.
2. Select **Create Label**, **Create in Live Editor**, or edit an existing label.
3. Give the label a clear internal **Title**.
4. Turn **Enabled** on when it is ready to use.
5. Optionally select a **Label group**.
6. Optionally set a start and/or end date.
7. Choose what you are creating: a standard badge, service row or branch availability row.
8. Add conditions if the label should only appear on selected products.
9. Configure its image, content, placement and device visibility.
10. Preview and save.

1. **Title** - An internal name used to identify the label in Admin and Live Editor.
2. **Enabled** - Turn this on only when the label is ready to appear.
3. **Label group** - Organises labels in the library. Choose **Global** if no group is needed.
4. **Create group** - Creates a new group and assigns it to the current draft. Save the label to keep that assignment.
5. **Scheduled start date** - Keeps the label hidden until this date.
6. **Scheduled end date** - Stops the label appearing after this date.
7. **What are you creating?** - Choose a standard image badge, service information row or branch availability row.
8. **Save Label** - Saves the label and makes it available to the storefront when all conditions are met.

Scheduling labels

Start and end dates are optional.

- Leave both blank to keep the label available whenever it is enabled and its conditions match.
- A start date keeps the label hidden until that date.
- An end date removes it after that date.
- Scheduling works alongside Enabled status and product conditions.

Start date

End date

dd / mm / yyyy

dd / mm / yyyy

Optional schedule: starts at the beginning of the start date and ends after the end date. Leave both blank to keep this label always available.

1. **Scheduled start date** - The label is hidden until this date.
2. **Scheduled end date** - The label stops appearing after this date.
3. **No dates selected** - The label remains available whenever it is enabled and its product conditions match.

Product conditions

Product conditions use Magento's normal nested rule builder, with the additional of a search function we have added to help you identify your attributes better

- Leave the rule empty to apply the label to all otherwise eligible products.
- Click a condition to choose its attribute, operator and value.
- Use the green **+** to add a condition.
- Use the red **x** to remove a condition.
- If you open **Please choose a condition to add** and change your mind, use its red **x** to remove that unfinished row.
- Use **ALL** when every condition must match, or **ANY** when one matching condition is enough.
- Use **Reload conditions** if the visible rule builder needs refreshing.
- Use **Open full Admin editor** when you need the full-page Magento rule-builder view.

Always preview the rule against one matching and one non-matching product before publishing it.

If **ALL** of these conditions are **TRUE** :

Product Name (name) **contains** **washing machine 9kg** ✕

washing

Please choose a condition to add. ▼

Preview Changes Discard Save label

1. **ALL or ANY** - Choose whether every condition must match, or whether one matching condition is enough.
2. **Product attribute** - Select what to test, such as brand, category, special price or a custom attribute. (if any are not visible please contact support to have additional attributes exposed to this condition list)
3. **Operator** - Choose how the attribute should be checked, such as *is*, *contains* or *greater than*.
4. **Value** - Enter or choose the value that should match.
5. **Add condition** - Use the green + to add another condition.
6. **Remove condition** - Use the red remove icon to remove a condition.
7. **New-condition row** - Select another condition to add, or remove the unfinished row if you change your mind.

Standard image badges

Standard badges use an uploaded image or an image selected from the Product Label image library.

Choose the product-page and catalog-card positions independently. Select **None** for a destination where the badge should not appear.

Typical uses include:

- warranty graphics
- finance logos
- sale or promotion graphics or

- delivery or trust badges.

Badge images

You can:

- upload a GIF, JPG, JPEG or PNG; or
- choose an existing image from the **Product Label library**.

The library contains only Product Label media. It does not expose the store's full Magento media library.

Badge placement in Live Editor

For a standard image badge, Live Editor shows **3. Badge placement** instead of the service-row placement controls.

- **Product-page position** controls the selected product-page badge location.
- **Catalog-card position** controls the selected catalog-card badge location.
- **Priority** controls the order of badges in the same location; lower numbers appear first.
- **Badge text** and **Promotion text mode** can add a short promotional message to a compatible badge image.
- **Label link URL** can make a badge clickable. Select **Open label link in new window** only where this is useful for the customer journey.

Grid View

The screenshot displays a product page for a 'Beko DVS05C20W Slimline Dishwasher - White'. The page is annotated with numbered callouts (1-6) pointing to specific badges and elements:

- Callout 1:** Points to a 'Year 1 Warranty' badge.
- Callout 2:** Points to a 'Claim a 5 Year Warranty*' badge.
- Callout 3:** Points to a 'Multibuy SAVE £40' badge.
- Callout 4:** Points to an 'On Display In Store' badge.
- Callout 5:** Points to a 'FREE in-store collection' badge.
- Callout 6:** Points to a 'Year 1 Warranty' badge.

The product details include:

- Product Name:** Beko DVS05C20W Slimline Dishwasher - White
- Rating:** 5 stars (303 reviews)
- Retail Price:** £289.00
- Color:** White
- Manufacturer Guarantee:** 1 year
- EAN:** 8690842376986
- Depth (cm):** 60cm

Additional features and badges shown include:

- LEGO logo**
- In Stock** with 'Click + Collect' and 'Next working day delivery available*'.
- We Price Match** badge: 'Found it cheaper? Ask us to match it.'
- Add to Basket** and **More Info** buttons.
- Add to Wish List** and **Add to Compare** links.
- Warranty 1 Year** badge.
- FREE in-store collection** badge.

- **Catalog-card position** controls the selected catalog-card badge location. (These apply to both Grid and List views of the catalog)

- **Priority** - Orders badges that use the same location.
- **Badge text** - Adds short text to a compatible badge image.
- **Promotion text mode** - Selects whether promotional text is shown as a percentage, amount or plain display text.
- **Label link URL** - Optional destination for a clickable badge.
- **Open label link in new window** - Opens the configured link in a new browser tab.

Service rows

Service rows are flexible customer-information panels. A row can contain a theme icon or uploaded image, title, supporting copy, optional tooltip and optional link.

Content and style

For a service row, configure:

- store views;
- row title and supporting copy;
- display spacing: Compact, Standard, Relaxed or Custom;
- style preset: Neutral, Success, Finance, Trust, Custom colours or None (transparent);

- a theme icon, uploaded image or no icon;
- Image link URL (only for uploaded image)
- tooltip content and link; and
- spacing, custom colours, gradients, border, icon and text colours.

Leave both copy fields blank to create an image-only service row.

Use **Store views** to choose which storefronts can use the service row. Select the relevant store views, or **All store views** where the same message should be available everywhere.

1. **Row title** - Main customer-facing message.
2. **Supporting copy** - Optional secondary text beneath or beside the title.
3. **Display spacing** - Choose the recommended Standard spacing, or a more Compare/Relaxed layout.
4. **Style** - Choose a visual preset such as Neutral, Success, Finance, Trust or None.
5. **Icon source** - Choose a theme icon, uploaded image or no icon.
6. **Replace image** - Upload a new image for this label.
7. **Choose from library** - Reuse an image already stored in the Product Label image library.
8. **Image Link URL (for uploaded images only)** - put in the desired url of the page you wish to redirect to, if you wish to direct a user on your website, do not input your full website address. i.e. **"/promotions"** will land the customer to "**https://mywebsite.co.uk/promotions**", full links are only required for off site redirect, however we would advise again off-site redirect for the purpose of keeping customers on your website
9. **Open image link in new tab (for uploaded images only)** -
10. **Browse icons (Theme Icon only)** - Open the visual icon picker and select a theme icon.
11. **Advanced display settings** - Available when Display spacing is set to Custom; controls the icon-and-copy gap and space after the row.

10

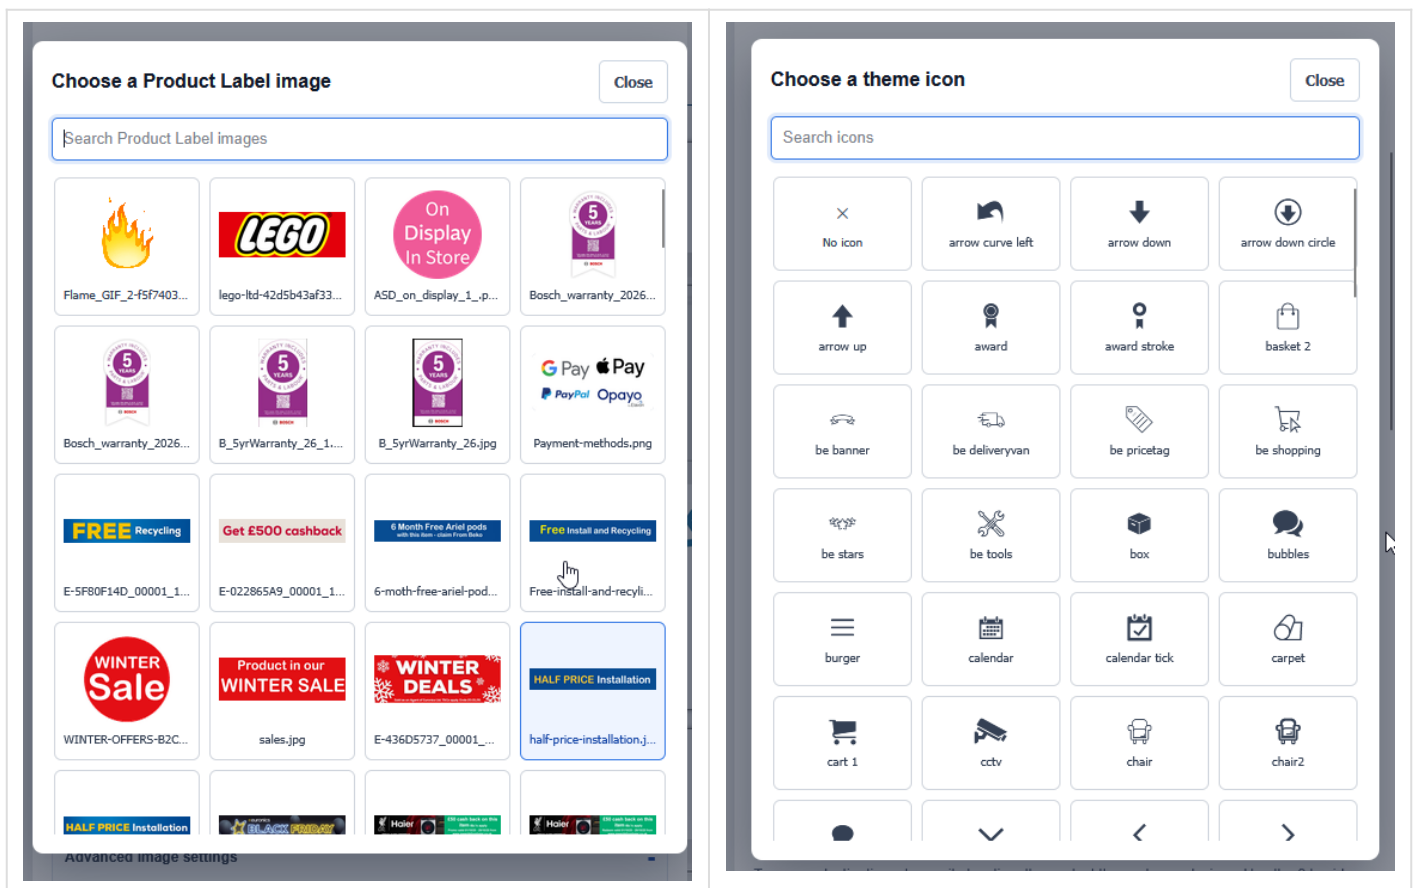

Image and icon pickers

Use **Browse icons** to open a searchable visual list of approved theme icons. Select **No icon** if the row should have no icon or image.

Use **Choose from library** to search and select an existing Product Label image. This library is intentionally limited to Product Label media, so it does not expose unrelated website images.

Uploaded images and alignment

When **Icon source** is set to **Uploaded image**, open **Advanced image settings** to control:

- image layout;
- **Image size beside copy**: Compact, Standard, Large or Custom;
- maximum image width and height; and
- **Image alignment**: **Start**, **Centre** or **End**.

Use **Image size beside copy** when an uploaded image sits alongside a title or supporting copy. **Standard** is the recommended starting point for readable promotion graphics; **Custom** uses the maximum width and height fields below. Compact keeps the small icon-sized appearance.

Image alignment is useful when an image-only row has unused horizontal space, for example a natural-width warranty image above a product image. **Centre** is the default. **Fill** and **Cover** use

the full available width, so alignment does not materially change those layouts.

library. The library is limited to productlabel media only.

Advanced image settings

Uploaded image layout

Icon beside content1

Image size beside copy

Compact (current size)2

Use this when an uploaded image sits beside a title or supporting copy. Standard is usually the clearest starting point for promotion graphics.

Image alignment

Centre3

Controls an image-only row when its image does not fill the available width. Fill and Cover layouts already use the full row width.

Maximum image width (px)

04

Maximum image height (px)

1605

Enter 0 for width to use the full available column. Contained keeps the whole image within

- 1. **Uploaded image layout** - Controls how the image sits within the label.
- 2. **Image size beside copy** - Choose Compact, Standard, Large or Custom when an image appears beside text.
- 3. **Image alignment** - Align an image-only label to the start, centre or end of its available space.
- 4. **Maximum image width** - Limits the rendered image width when using Custom sizing.
- 5. **Maximum image height** - Limits the rendered image height when using Custom sizing.

Where a service row can appear

Enable each destination independently, then choose its location, row width where available, row order and visible devices.

Destination	Available locations
Catalog (Grid Display)	Within grid card or Top of card (above product image) . Top-of-card rows can be full, half or flexible width.

Catalog (List Display)	First column: above product image , first column below product image/brand, middle column below product details, or right column (flex ordered). The above-image choice stays within the first column; it never spans into the other columns.
Product page	Top of information panel, below price and delivery, or below add-to-basket actions.
Calculus Product Display	Compatible Calculus Product Display cards or widgets where labels are enabled.
Product Sliders	Supported Page Builder product sliders: top of card, above price or below availability/delivery.

For rows that share a Catalog Grid, Catalog List, Product Page or Product Display location, use **Row order in this location** to control their order. Width options let compatible rows share a line.

Product Sliders are a fixed card layout. Multiple service rows in the same slider rail are ordered by the label's **Priority** instead.

For Calculus Product Display, the relevant Product Display widget or carousel must also have labels enabled in its own settings.

Catalog Grid and Catalog List placement

1. **Destination toggle** - Turns the label on or off for this storefront area.
2. **Placement dropdown** - Chooses the exact location within that area.
3. **Row width** - Controls whether compatible service rows use the full width, half width, flexible width or another available option.
4. **Row order** - Controls the order of labels that share the same location.
5. **Device visibility** - Select the desktop, tablet and mobile layouts where the label may appear.
6. **Placement help** - Use the  icon for an explanation of where that option renders on the storefront.
7. **Current Layout Order** - If applicable this will show other visible labels orders, allowing you to easily identify where to place your label with ease

Product Page and Product Slider placement

1. **Destination toggle** - Turns the label on or off for this storefront area.
2. **Placement dropdown** - Chooses the exact location within that area.
3. **Row width** - Controls the width used by the label where supported.
4. **Row order** - Controls the order of labels in the same location.
5. **Device visibility** - Select the supported device layouts.
6. **Placement help** - Explains the selected storefront location.

Surface-specific copy

Use **Surface-specific copy** only when the same service row needs different wording in different locations. You can override the title and supporting copy for Catalog Grid, Catalog List, Calculus Product Display and Product Sliders.

Leave an override blank to use the default row title and supporting copy from **Content and appearance**.

Surface-specific copy

1. **Catalog card title and supporting copy** - Optional wording for Catalog Grid cards.
2. **Catalog list title and supporting copy** - Optional wording for Catalog List cards.
3. **Product Display title and supporting copy** - Optional wording for supported Calculus Product Display widgets.
4. **Product Slider title and supporting copy** - Optional wording for supported product sliders.

Colours, gradients and tooltip styling

The chosen style preset is the recommended starting point. Select **None (transparent)** when the row should have no preset background or border.

For a custom design, use the colour picker or enter a full hexadecimal colour value. You can set row background, gradient start and end, border, title, supporting copy, icon and information-icon colours. The same section also includes tooltip background, border and text colours.

Leave custom colour fields blank to retain the selected style palette. A gradient needs both a start and end colour; **Gradient angle** controls its direction.

Colours and gradient settings

1. **Use selected style palette as custom colours** - Starts custom styling from the current preset colours.
2. **Row background and gradient colours** - Controls the main label background.
3. **Border, title, supporting copy and icon colours** - Controls the label's visible details.
4. **Tooltip colours** - Controls the information tooltip appearance.
5. **Gradient angle** - Controls the direction of a configured gradient.

Tooltips and links

A service row can show an information tooltip when extra detail would be useful but should not always be visible.

- Turn on **Enable tooltip**.
- Add an optional tooltip title and supporting text.
- Add an optional link label and link URL where customers need a next step.
- Tooltip links can be a site-relative path beginning with `/`, or a valid `http` or `https` URL.

Tooltip settings

1. **Enable tooltip** - Shows the information icon on the service row.
2. **Tooltip title** - Optional heading in the tooltip.
3. **Tooltip text** - Supporting information shown when the tooltip opens.
4. **Tooltip link label and URL** - Optional customer call to action.

Device visibility

Every destination has device pills:

- Desktop
- Tablet landscape
- Tablet portrait
- Mobile landscape
- Mobile portrait

A selected pill means the row is eligible to appear at that device profile. Use Live Editor's device controls to check the real storefront behaviour before saving.

These device pills control whether customers can see the label at each layout. They are separate from the **Preview device** controls at the top of Live Editor, which only change your private preview size.

Using Live Editor

Live Editor opens the real storefront in a separate popup window with an Admin-only editing tray on the left.

You can open it from:

- **Open Live Editor** in the Product Label Library header;
- **Create in Live Editor** in the header;
- **Live Editor** in a label's action menu; or
- **Live Editor** on a saved label's normal edit form.

Product Label Library
 Create, preview, schedule, and manage every storefront badge and service row in one place.

☐		A Standard badge Global Enabled Attribute match	Product: Top left	Always live	Global	1	Jun 14, 2021 11:01:57 AM	

If your browser blocks the popup, allow popups for the site and try again

Live Editor panel order

The tray is designed to be worked through from top to bottom. Some sections are shown only for the selected label type.

- Header and session timer** - Shows the label being edited, the remaining secure session time and the minimise control.
- Private-preview notice** - Confirms that changes are private until the label is saved.
- Label library** - Search, filter, switch, create and highlight labels.
- Preview device** - Check the storefront at desktop, tablet and mobile layouts.
- 1. Basic details** - Title, enabled state, group, schedule and label type.
- 2. Content and appearance** - Service-row copy, spacing, style, icons and images.
- 3. Badge placement** - Shown for standard image badges.
- 3. Placement** - Shown for service rows and branch availability rows.
- Surface-specific copy, Colours and gradient, and Tooltip** - Additional service-row controls.
- Product conditions** - Controls which products can receive the label.
- Footer actions** - Preview changes, discard, save, hide or stop Live Editor.

Preview device

Use **Preview device** to view the real storefront at desktop, tablet landscape, tablet portrait, mobile landscape or mobile portrait sizes. This does not change where the label is allowed to appear; use the device pills in **Placement** to configure customer visibility.

Live Editor unavailable?

Ask Calculus support whether the site's secure Live Editor setup has been completed. Until it is available, standard image badges can still be managed through the normal Admin form, but without Live Editor's visual preview and service-row tools.

Live Editor Label Library

1. **Search labels** - Find a label by title.
2. **Label-type filters** - Show all labels, service rows or standard badges.
3. **Group filter** - Show labels from one group or all groups.
4. **Show inactive labels** - Include disabled or currently unavailable labels in the list.
5. **Pick a label from this page** - Select a label that is currently visible on the storefront.
6. **Create a new label** - Start a new draft directly in Live Editor.
7. **Selected label and availability** - Shows which label is being edited and whether it is enabled.
8. **Highlight selected label** - Clearly outlines the selected label on the storefront.
9. **Preview device** - Switch between desktop, tablet and mobile preview sizes.

Working in the tray

- The tray can be collapsed and resized.
- When the tray is hidden, use the small **Edit label** control to reopen it.
- Every main section can be expanded or collapsed.
- **Label library** lets you search labels, filter by group, include inactive labels, select a label already visible on the page, or create a new label.
- The selected label is marked in the library list. Enable highlighting to locate it on the storefront.
- Device controls switch the preview between desktop, tablet and mobile layouts.
- Placement  buttons explain exactly where each selected destination renders.

Preview, save and discard

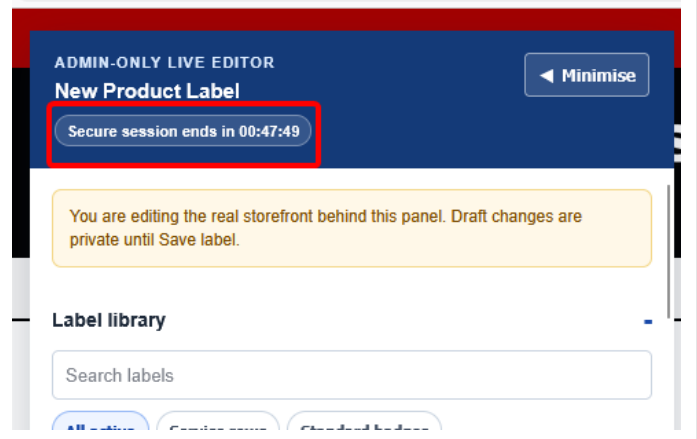

- **Preview changes** applies the draft only to your private storefront preview.
- **Save label** saves the label for normal storefront use.
- **Discard** restores the last saved state.
- **Hide editor** temporarily collapses the tray while keeping the private preview session open.
- Changes are not live for customers until you save the label.

The tray keeps its scroll position and open sections after a private preview refresh, so you do not need to scroll back to the same field repeatedly.

Session timer

Secure Live Editor sessions last for up to one hour. The tray shows a visible **Secure session ends in** countdown and changes warning colour during the final five minutes.

Save work before the timer expires. When the secure session ends, the editor closes itself safely. Reopen Live Editor to start a fresh session.

Stopping Live Editor

Select **Stop Live Editor** when you have finished. The popup closes the private editing session and returns to the Product Labels Admin page.

Live Editor preview and save controls

1. **Secure session timer** - Shows how long the current Live Editor session remains active.
2. **Minimise** - Collapses the editing tray so more of the storefront is visible.
3. **Resize handle** - Drag to make the editor tray wider or narrower.
4. **Highlighted label** - Shows the label currently being edited on the storefront.
5. **Preview changes** - Applies the draft only to your private preview.
6. **Discard** - Removes unsaved changes and restores the last saved version.
7. **Save Label** - Publishes the saved label for normal storefront use.
8. **Hide editor** - Temporarily collapses the tray without ending the session.
9. **Stop Live Editor** - Ends the private preview session and returns to Product Labels in Admin.

Legacy standard badge configuration (when Live Editor is unavailable)

This section applies when Live Editor has not been enabled for a site. Standard image badges can still be created and edited through the normal Admin form. This is the established configuration route for traditional badges placed over product or catalog images, in product-page panels and in legacy row locations.

It does not provide the newer visual editing, service-row placement, device preview or page-selection tools. Contact Calculus support if you would like Live Editor enabled for your site.

Legacy standard badge configuration

1. **Image preview** - Shows the image currently used by the badge.
2. **Upload** - Upload a new GIF, JPG, JPEG or PNG badge image.
3. **Badge position on product page** - Choose where the badge appears on product pages.
4. **Badge position on catalog cards** - Choose where the badge appears on catalog and compatible product cards.
5. **Save Label** - Saves the standard badge configuration.

Before publishing: quick checklist

Is the label itself enabled?

- Do its schedule dates include today?
- Do its conditions match the intended products?
- Is the right label group selected for easy administration?
- Is the correct destination enabled?
- Are the expected device pills selected?
- Does the label look right on desktop, tablet and mobile?
- If it is an image-only row, is its width and image alignment correct?
- Has the final version been **saved**, not only previewed?

Need help?

If Live Editor is unavailable, a secure session expires unexpectedly, or a label does not appear after all of the checklist items have been confirmed, contact Calculus support with:

- the label name;
- the page URL and product SKU being tested;
- the selected destination and device profile; and
- a screenshot of the label form or Live Editor tray.
