

Picking Jobs

Picking Jobs are used in conjunction with Load Vans to get stock ready for Deliveries/Couriers.

They can be used and set up in many different ways and it will require consultation before use so it can be configured correctly for your business.

Picking Jobs would be used to get stock ready in a Pre-load location as a step before Loading Vans.

Picking Jobs allow for picking by location instead of by engineer/courier. It works by checking the list of all items which are due to be going out on a selected date, ordering them by location, and then allocating X number of items for a user to pick, these items are then excluded from any future picking jobs raised. This allows for more efficiency when picking stock, especially where multiple operatives are picking stock at the same time.

If you feel this feature may benefit your business please contact Admin to arrange a consultancy call with the Implementation Team.
